№ Nebusis® EmissionsFlow

The Smart Platform for Carbon Accounting & GHG Management

Turn complexity into clarity. Track emissions, power reductions, and report with confidence—all in one intelligent platform.

🌍 Your End-to-End Carbon Intelligence Hub

Nebusis® EmissionsFlow™ is a next-generation greenhouse gas management solution built for precision, power, and simplicity. Designed for organizations serious about climate action, EmissionsFlow empowers teams to calculate, monitor, and reduce carbon emissions with Al-driven accuracy and seamless compliance.

🗱 What You Can Do with EmissionsFlow

Ⅲ Visualize Emissions in Real Time

- Track Scope 1, 2, and 3 emissions with interactive dashboards
- Instantly view trends and compare performance over time
- Leverage Al-powered automation to simplify complex calculations

Automate Carbon Calculations with Al

- Intelligent emission factor suggestions based on activity and sector
- Smart source classification by scope
- Al-assisted data validation and quality control
- Real-time carbon accounting recommendations

Master GHG Inventory Management

- Fully aligned with ISO 14064-1
- Guided 7-step inventory workflow
- Automated data capture and traceability
- Built-in audit trails and regulatory-ready reporting

Track Your Reduction Projects

- Monitor progress of carbon reduction initiatives
- Run ROI forecasts and impact assessments
- Align project milestones with emissions targets
- Generate transparent performance reports

Analyze Product Carbon Footprints

- Built-in Life Cycle Assessment (LCA) engine
- Cradle-to-grave emission modeling
- Supply chain tracking and product-level metrics
- Ideal for EPDs and Scope 3 reporting

Simplify Verification & Audits

- Support for third-party verifiers and internal QA
- Aligned with ISO 14064-3 and GHG Protocol
- Automated checklists and document upload portals
- Verification-ready outputs with full traceability

Powered by Advanced Technology

Al You Can Trust

- GPT-4 carbon accounting assistant
- Auto-classification of sources and scopes
- Predictive analytics for emission forecasting
- Access to 10,000+ preloaded emission factors

Cloud-Native Architecture

- 99.9% uptime and global scalability
- Real-time sync across teams and facilities
- Enterprise-grade encryption and data security

Built for Compliance

Compliant with leading standards and frameworks:

- ISO 14064-1 & 14064-3
- GHG Protocol (Corporate Standard)
- Task Force on Climate-related Financial Disclosures (TCFD)
- Science Based Targets initiative (SBTi)

Who Uses Nebusis® EmissionsFlow?

Designed for:

- Sustainability Directors & ESG Leaders
- Environmental Consultants & Verifiers

- Compliance Managers & Auditors
- Data Analysts & Reporting Teams

Trusted by:

- Multinational Corporations tracking complex, multi-scope emissions
- Manufacturers managing upstream/downstream supply chain emissions
- Government agencies fulfilling international reporting obligations
- ESG consulting firms and auditing organizations

Proven Use Cases

- Annual corporate GHG inventories
- Scope 3 supply chain engagement
- Sustainability-linked reporting and disclosures
- ESG due diligence and third-party audits
- National and regional climate compliance programs

* Why Organizations Choose EmissionsFlow

- Precision Al-enhanced, verifiable carbon calculations
- Speed Cut GHG accounting time by up to 75%
- Compliance Built-in alignment with global frameworks
- Scalability Start small, scale globally on one platform
- Insight Actionable analytics to drive real reductions
- Support Expert-led onboarding and client success

Start Your Carbon Transformation Today

Join forward-thinking companies and institutions already leading the charge with **Nebusis® EmissionsFlow™**. From measurement to verification, we simplify every step of your carbon journey.

Nebusis® EmissionsFlow™ – Where Sustainability Meets Intelligence.
